

IN THE CLAIMS

Claims 1 - 8 are pending in this application. Please amend claims 1 – 5 and add new claims 9 - 19 as follows:

1. (Currently Amended) A health management support method implemented in a computer-based data processing system for generating life expectancy data to be used in a health management system, comprising:

providing a database for storing healthy life expectancy prediction data that represents transition of a percentage of normal people in each result of health screening;

~~a health screening report data entry step which comprises getting~~ generating health screening report data for each person who ~~underwent~~ undergoes health screening by data entry means;

~~a personal healthy life expectancy prediction data generating step which comprises preparing healthy life expectancy and generating personal healthy life expectancy prediction data~~ by selecting at least one of said healthy life expectancy prediction data from the based on said inputted health screening report data for a each said person using the healthy life expectancy prediction data; and

~~a personal healthy life expectancy prediction step which comprises estimating a predicted period of healthy life expectancy of each said person, using the generated by calculating based on said selected personal healthy life expectancy prediction data;~~ and

outputting said estimated predicted period of healthy life expectancy of each said person.

2. (Currently Amended) A health management support method as recited in claim 1, further comprising:

a health management plan generation step which comprises generating health management plans for each said person who underwent health screening, based on the predicted value of healthy life expectancy of each said person ~~estimated in the personal healthy life expectancy prediction step.~~

3. (Currently Amended) A health management support method as recited in claim 2, wherein the health management plan generation step comprises ~~health screening plan generation steps for~~ generating health screening recommendation plans.
4. (Currently Amended) A health management support method as recited in claim 2, wherein the health management plan generation step further comprises ~~healthy life-style plan generation steps for~~ generating healthy lifestyle practice recommendation plans for guiding each person in improving his or her living habits such as meals, exercise, and smoking.
5. (Currently Amended) A health management support method as recited in claim [[2]] 4, further comprising:

A health management effect prediction step which comprises estimating change to the predicted period of healthy life expectancy of a person, wherein the expected change ~~expected, assuming that is based on the person would practice practicing~~ life-style improvement advised in a health management plan generated in the health management plan generation step.
6. (Original) A health management support method as recited in claim 5, further comprising:

a medical payment prediction step which comprises preparing medical payment prediction knowledge data beforehand as basic data for predicting medical payment from a diversity of healthy life expectancy and calculating change to medical payment predicted for a person who underwent health screening, based on the change to the predicted period of healthy life expectancy of the person estimated in the health management effect prediction step and through the use of the medical payment prediction knowledge data.
7. (Original) A health management support method as recited in claim 1, further comprising:

a medical payment prediction step which comprises preparing medical payment prediction knowledge data beforehand as basic data for predicting medical payment from a diversity of healthy life expectancy and calculating predicted medical

payment that each person who underwent health screening may pay in future, based on the predicted period of healthy life expectancy of each person estimated in the personal healthy life expectancy prediction step and through the use of the medical payment prediction knowledge data.

8. (Original) A health management support method as recited in claim 1, further comprising:

a medical insurer management support step which comprises predicting aggregate medical payment of a medical insurer as a whole, based on the predicted period of healthy life expectancy of each assured person who is a policyholder insured by the medical insurer.

9. (New) The health management support method according to claim 1, wherein said calculation is performed by applying an equation

$$\sum_{x=1}^{00} Lx/Li$$

to select said healthy life expectancy prediction data when age of said person is i.

10. (New) The health management support method according to claim 1, wherein said healthy life expectancy prediction data is generated by collecting health screening report data of a plurality of person, collecting medical data comprised of medical services details, generating a healthy life expectancy prediction data by calculating the percentage of the dead and the percentage of people being sick or disabled for every age from said medical data, and generating healthy life expectancy prediction data.

11. (New) The health management support method according to claim 10, wherein medical data has medical fee bill data.

12. (New) A health management support program implemented in software stored on a tangible medium for generating life expectancy data to be used in a health management system, said program comprising the steps of:
- providing a database for storing healthy life expectancy prediction data that represents transition of a percentage of normal people in each result of health screening;
 - generating health screening report data for each person who undergoes health screening by data entry means;
 - generating personal healthy life expectancy prediction data by selecting at least one of said healthy life expectancy prediction data based on said inputted health screening report data for each said person;
 - estimating a predicted period of healthy life expectancy of each said person, by calculating based on said selected personal healthy life expectancy prediction data; and
 - outputting said estimated predicted period of healthy life expectancy of each said person.
13. (New) A health management support program as recited in claim 12, further comprising:
- a health management plan generation step which comprises generating health management plans for each said person who underwent health screening, based on the predicted value of healthy life expectancy of each said person.
14. (New) A health management support program as recited in claim 13, wherein the health management plan generation step comprises generating health screening recommendation plans.
15. (New) A health management support program as recited in claim 13, wherein the health management plan generation step further comprises generating healthy lifestyle practice recommendation plans for guiding each person in improving his or her living habits such as meals, exercise, and smoking.

16. (New) A health management support program as recited in claim 15, further comprising:

A health management effect prediction step which comprises estimating change to the predicted period of healthy life expectancy of a person, wherein the expected change is based on the person practicing life-style improvement advised in a health management plan generated in the health management plan generation step.

17. (New) A health management support program as recited in claim 16, further comprising:

a medical payment prediction step which comprises preparing medical payment prediction knowledge data beforehand as basic data for predicting medical payment from a diversity of healthy life expectancy and calculating change to medical payment predicted for a person who underwent health screening, based on the change to the predicted period of healthy life expectancy of the person estimated in the health management effect prediction step and through the use of the medical payment prediction knowledge data.

18. (New) A health management support program as recited in claim 12, further comprising:

a medical payment prediction step which comprises preparing medical payment prediction knowledge data beforehand as basic data for predicting medical payment from a diversity of healthy life expectancy and calculating predicted medical payment that each person who underwent health screening may pay in future, based on the predicted period of healthy life expectancy of each person estimated in the personal healthy life expectancy prediction step and through the use of the medical payment prediction knowledge data.

19. (New) A health management support program as recited in claim 12, further comprising:

a medical insurer management support step which comprises predicting aggregate medical payment of a medical insurer as a whole, based on the predicted period of healthy life expectancy of each assured person who is a policyholder insured by the medical insurer.
